

- 1 Digital display actual value (depending on type)
- 2 Digital display setpoint
- 3 Key for setpoint and parameter mode
- 4 Setpoint adjustment
- 5 Parameter mode lock switch (back face)

General:

The units in 96 x 96 panel mounting format are based on the KFM 92 industrial control unit series and allow external setting of one to three setpoints or continuous control outputs and up to 4 three-level signals. Upper and lower limits can be assigned to the setting ranges.

The unit has a dual display. In operating mode, the target value or control output is displayed in the lower row. The upper row can optionally be used for the remote display of the actual value.

Accessories from the KFM 92 product range are available as an option.

Types:

	<i>Type</i>
Setpoint generator	9293.
Setpoint generator with actual value remote display (Pt100 / standardised signal)	9293.0 / e
